### Information on Electro Magnetic Compatibility (EMC) &EMC Declarations(IEC 60606-1-2)

7

**WARNING:** "Use of this equipment adjacent to or stacked with other equipment should be avoided because it could result in improper operation. If such use is necessary, this equipment and the other equipment should be observed to verify that they are operating normally."

**WARNING:** "Portable RF communications equipment (including peripherals such as antenna cables and external antennas) should be used no closer than 30 cm (12 inches) to any part of the AG Cuffill including cables specified by the manufacturer. Otherwise, degradation of the performance of this equipment could result."

**WARNING:** "Avoid using equipment in case the display flickers with no ability to read the value during the disturbance".

Classification of Equipment (CISPR11/EN 55011)  Compliance Test  Compliance  RF emissions CISPR 11  Class B  AG Cuffill belongs to this group of equipment who ferrower suited to his group of equipment whore for equipment function. 5500		a/n	modulation <sup>b)</sup> 217 Hz				
5785	1						

NOTE: If necessary to achieve the IMMUNITY TEST LEVEL, the distance between the transmitting antenna and the ME EQUIPMENT or ME SYSTEM may be reduced to 1 m. The 1 m test distance is permitted by IEC 61000-4-3.

- a) For some services, only the uplink frequencies are included.
- b) The carrier shall be modulated using a 50 % duty cycle square wave signal.
- c) As an alternative to FM modulation, 50 % pulse modulation at 18 Hz may be used because while it does not represent actual modulation, it would be worst case.

Vorgesehene Anwender:
Der Hospitech AG Cuffill darf nur unter ärzliicher
Aufsicht in Kliniken, Präklinik (RD), Einrichtungen zur
Langzeitbehandlung und Ambulanzen, in denen
Patienten intubiert werden können, verwendet

Der AG Cuffill sollte nicht zur kontinuierlichen Überwachung verwendet werden. Er sollte nach jeder Verwendung getrennt werden. Der AG Cuffill ist für die Verwendung mit einem luftgefüllten Cuff vorgesehen und darf nicht mit Flüssigkeiten verwendet werden, weil dies zu Schäden führen kann.

Lagerung und Transport des AG Cuffill müssen in einer trockenen Umgebung

 $\triangleright$ Stellen Sie sicher, dass der Luer-Anschluss an der Spitze des Cuffill nicht blockiert ist und für den Umgebungsdruck offen ist.

> 4. Falls erforderlich, kann der Cuffdruck durch Zurückziehen des Spritzenkolbens reduziert werden, bis der benötigte Druck erreicht ist.
> 5. Trennen Sie den AG Cuffill vom Cuff-Füllventil.
>
> Bedienungsanleitung
> Cuffdruck anpassen: (siehe nachfolgende Schalten Sie den AG Cuffill durch Drücken der EIN-/AUS-Taste auf der rechten Seite des Displays ein. Das Display blinkt zweimal und zeigt dabei die verbliebene Anzahl der Ablesungen an. Danach zeigt es "00" an (siehe Abschnitt 6 – Display). Schließen Sie den AG Cuffill an das Cuff-Füllventil an und lesen Sie den angezeigte Druck ab. Schieben Sie den Spritzenkolben bis zum Anschlag hinein.

(N)

Schalten Sie den AG Cuffill durch Drücken der EIN-/AUS-Taste auf der rechten Seite des Displays ein. Das Display blinkt zweimal und zeigt dabei die verbliebene Anzahl der Ablesungen an. Danach zeigt es "00" an (siehe Abschnitt 6 – Display).

Ziehen Sie den Spitzenkolben bis etwa zur Hälfte heraus.

Schließen Sie den AG Cuffill an das Cuff-

Wird der erforderliche Druck nicht erreicht, nehmen Sie den AG Cuffill ab, ziehen Sie den Spritzenkolben 1 bis 2 ml zurück und wiederholen Sie diesen Schritt.

Trennen Sie den AG Cuffill vom Cuff-Füllventil Ändern Sie die Position des Spritzenkolbens, bis der gewünschte Druck erreicht ist.

ACHTUNG: Beim Trennen kann sich der Cuffdruck um 1 bis 2 cmH<sub>2</sub>O/mmHg verringern.

## Anweisungen für Reinigung, Desinfektion und Lagerung

(J

ω

Allgemeine Anweisungen für Reinigung und Desinfektion:

Das nachfolgend beschriebene Reinigungs- und Desinfektionsverfahren muss nach jedem Patienten durchgeführt werden. Der Cuffill darf höchstens 100 Mal bei einem oder verschiedenen Patienten angewendet werden.

Verwenden Sie weiche, saubere, neue Pads, die feucht, aber nicht tropfnass sein sollen.

Ziehen Sie den Kolben aus dem Spritzenzylinder

Vermeiden Sie während der Reinigung oder Desinfektion das Eindringen jegicher Flüssigkeit in den AG Cuffill-Sensor an der Spitze der schwarzen Dichtungsmanschette.

Benetzen Sie einen sauberen Pad mit Alconox 1 % (verühnrt mit destillierten Wasser) oder Septal Scrub 4 % Chloroxidin-Lösung.
Wischen Sie die Oberfläche des Geräts (Zylinder und Kolben) ab und reinigen Sie es gründlich, bis keine Verschmutzungen mehr vorhanden sind. Wiederholen Sie dies mindestens 4 Mal.

Benetzen Sie einen sauberen Pad mit destilliertem Wasser. Wischen Sie die Oberfläche des Geräts gründlich damit ab.

Wischen Sie die Oberfläche des Geräts mit einem trockenen Pad ab. Lassen Sie das Gerät eine Stunde lang auf einer sauberen Fläche im Raum an der Luft trocknen.

Benetzen Sie einen sauberen Pad mit Alkohol IPA 70 % oder Wasserstoffperoxid 1,4 %.

keine Verschmutzungen mehr vorhanden sind Wiederholen Sie dies mindestens 4 Mal. Wischen Sie die Oberfläche des Geräts (Zylinder und Kolben) ab und reinigen Sie es gründlich, bis

Wischen Sie die Oberfläche des Geräts mit einem trockenen Pad ab. Lassen Sie das Gerät 2 Minuten lang auf einer sauberen Fläche im Raum an der Luft trocknen.

Stecken Sie den Kolben nach Abschluss des Reinigungs- und Desinfektionsverfahrens wieder in den Spritzenzylinder. Der Cuffill kann jetzt bei einem neuen Patienten angewendet werden.

# Lagerung zwischen Anwendungen bei dem gleichen oder bei verschiedenen Patienten:

Wenn das Gerät auf einer Intensivstation immer beim gleichen Patienten eingesetzt wird, sollte es im Schrank/auf dem Tisch neben seinem Bett aufbewahrt werden.

Wenn das Gerät bei verschiedenen Patienten eingesetzt wird, sollte es wie andere

Medizinprodukte in einem verschlossenen Schrank im Lagerraum der Station aufbewahrt werden. Es wird empfohlen, das Gerät in einem Einweg-Plastikbeutel aufzubewahren.

nach der Aktivierung automatisch ab.

## Intended User AG Cuffill Intended Use and

<u>-</u>

Instructions for Use

The Hospitech AG Cuffill is intended to measure regulate the intra-cuff pressure of Endotracheal tubes, Tracheotomy tubes and Laryngeal Masks Airways (LMAs) (supragiottic airways). Intended Use: (Indications for Use):
The Hospitech AG Cuffill is intended to measure and

Intended User: The Hospitech AG Cuffill is used under medical supervision in hospitals, pre-hospital (EMS), extended care facilities and outpatient clinics, where a patient may be intubated.

6

Turn ON the AG Cuffill by pressing the power button on the right side of the display. The display will blink twice showing the number of readings left and then will display "00" (see section 6 - Display)

The AG Cuffill is intended for an air-filled cuff and should not be used with liquids, which will cause damage.

The AG Cuffil should not be used for continuous monitoring. It should be disconnected each time, after use.

9. 8 7

Push the syringe plunger in until it stops.
 Connect the AG Cuffill to the Airway cuff inflation line and read the pressure value.
 If required, cuff pressure may be reduced by pulling back the plunger until required pressure is achieved.

2

Disconnect the AG Cuffill from the cuff inflation line.

The AG Cuffill should be kept in a dry environment during transport and storage.

M Make sure that it is

Make sure that the luer (connector) at the tip of cuffill is clear of any obstruction and is open to (2)

Adjusting Cuff Pressure: (See the following figure.)

Instructions for Use

Specifications: of measured cuff pressure:

Model HSCUFF0031: 0-99 mmHg Model HSCUFF0041: 0-99 cmH<sub>2</sub>0

Accuracy of cuff pressure measurement:
Model HSCUFF0031: ± 2 mmHg
Model HSCUFF0041: ± 2 cmH<sub>2</sub>0

Size: Length: 13 cm; Diameter: (ID) 15 mm Weight: 18 gr.

Turn the AG Cuffill ON by pressing the power button on the right side of the display. The display will blink twice showing the number of readings left and then will display "00". (see section 6 - Display)

the plunger about half way out

Volume delivered: 0-10 cc in 1cc graduations Power: CR1632 3VDC / 130mAh battery

Storage/Operation:
Temperature: +10... +30°C (50...85°F)
Temperature: +10... +30°C (50...85°F)
Relative air humidity without condensation: 5...95%
Atmospheric Pressure: 700 hPa - 1060 hPa

10

If the required pressure is not achieved, disconnect the AG Cuffill, pull the plunger 1-2 cc backward and repeat this step.

Disconnect the AG Cuffill from the Airway cuff inflation line.

Adjust the plunger until the required pressure is achieved. Connect the AG Cuffill to the Airway cuff inflation line.

Temperature: -30...+60 °C (-22...140°F)
Relative air humidity without condensation: 30.
Atmospheric Pressure: 700 hPa 1060 hPa
Not made with natural rubber latex. ..95%

ATTENTION: When disconnecting, the Cuff pressure may be may drop by 1-2 cmH<sub>2</sub>O/mmHg

## Measuring Cuff Pressure: (See the following figure.) ω Cleaning, Disinfection and Storage Instructions

The cleaning and disinfection process described below is to be applied after each patient. The Cuffill is limited to 100 uses on the same or different

disinfection:

General instructions for cleaning and

Use soft, clean, new pads, taking care not to saturate the pads.

Pull out the plunger from the syringe barrel.

While cleaning or disinfection, prevent entry of any fluid into the AG Cuffill sensor at the tip of the black

## Cleaning: • Soak a cle

Soak a clean pad with Alconox 1% (diluted with distilled water) or Septal Scrub 4% Chloroxidine

Wipe the device surfaces (barrel and plunger) and clean thoroughly until product is clean from contamination. Repeat at least 4 times.

Soak a clean pad with distilled water. Wipe and clean the device surfaces.

4

Wipe the device surfaces with a dry pad and make sure to leave to dry for one hour on a clean surface in the room.

## Disinfection:

10

Soak a clean pad with either: Alcohol IPA 70% or Hydrogen Peroxide 1.4 %.

Wipe the device surfaces (barrel and plunger) and clean thoroughly until product is clean from contamination. Repeat at least 4 times.
 Wipe the device surfaces with a dry pad and make sure to leave to dry for 2 minutes on a clean surface in the room.

After completing the cleaning process and the disinfection process, insert the plunger back to the syringe barret. The Cuffill is now ready to be used on a new patient.

# Storage Between Same or New Patients:

While being used in an ICU for same patient: the device should be kept at the patient bedside trolley/bench.

While stored between patients: As other medical devices, it should be kept in a closed cabinet in the unit storage room. It is recommended to store in a disposable plastic bag.

### Display 25
